

Intraoral Camera Systems

The eZ1 Intraoral Camera from Gendex is as easy to use as your mirror, yet the camera will become a powerful communication tool to educate and connect with your patients.

Which Gendex camera is right for your practice?

The Gendex eZ1 and the AcuCam Concept IV camera systems both share a number of common features. Both cameras are easy to use, available in digital or analog configurations, and ideal for patient education and motivation. Every practice has different needs. Therefore, we advise you to carefully choose the best Gendex camera for integration into your practice.

Choose the Gendex eZ1 if you:

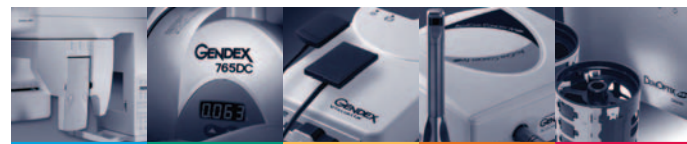

- Are seeking a simple, easy to use intraoral camera
- Intend to use the camera for quick overviews of oral health
- Intend to use the camera for patient education and case acceptance
- Require the common USB2 interface for digital use
- Want a lightweight camera with small docking station

Choose the AcuCam Concept IV if you:

- Are seeking a more sophisticated intraoral and extra-oral camera
- Are seeking the most advanced image quality from a camera repeatedly rated #1
- Intend to use the perfect color matched image and powerful 85x macro view to examine clinical dental anatomy
- Intend to store the images and observe clinical changes in dental anatomy over time
- Require uncompromised digital streaming through a Firewire connection, the defacto standard for ultimate image quality

- Easy to use
- Ideal for patient education
- Improved visual access

eZ1

Easy to use

The eZ1 is the easy to use camera for intraoral examinations. The lightweight handpiece does not require focal adjustment due to the extended depth of field and automatic brightness adjustment. The same eZ1 camera handpiece can be integrated into your office with a direct digital USB2 connection or an analog docking station. The stylish and affordable eZ1 Intraoral Camera will provide you with an exceptional tool for patient education, case acceptance, and improved patient communication.

Capture images easily by simply sliding a finger past the "soft-touch" control.

The latest LED technology doesn't require heavy fiber optic cables or bulky electronics.

Versatility

The eZ1 can be mounted anywhere, always within reach.

Flexibility

The direct digital version has no docking station, just miniature electronics on the USB2 cable.

Advanced ergonomics and a lightweight 50 gram handpiece make eZ1 comfortable to use.

Communication

Educate your patients with more effective communication.

Patients become more motivated, increasing case acceptance.

Your patients will become more comfortable with their oral health and treatment options.

The eZ1 camera disconnects effortlessly for quick transfer to another operatory.

The analog version features a small docking station that can capture up to four images for television viewing.
